

# SPOTTED LANTERNFLY TRAP LIGHT DUTY

## TRAP INCLUDES:

Screen trap body  
Trap top cylinder  
Plastic bag  
Resealable black cable tie

1. Take trap body out of box.
2. Hold trap with the white top pointing up.
3. Attach trap to tree (about chest level) by drilling drywall screw through the middle point of 18" cedar strip.
4. Line tabs on the bottom of trap top cylinder with the slots on the trap top. Rotate cylinder so that it will stay in place.
5. **IMPORTANT:** Make sure that when trap is bent over slightly, the tongue sticking out of the cylinder is at the top facing downward. This helps to hold bag open so that Spotted Lanternflies will fall into the bag.
6. Open plastic bag and gather bag opening around base of cylinder.
7. Place resealable black cable tie around bag and cylinder and pull until taut.
8. Weave a piece of twine, fishing line, small rope, etc. through eyelets at bottom of trap. Tie ends behind tree on opposite side of trap.
9. Check traps a couple of times a week and empty bag.
